Bulwark Moves to Advanced Fire Protection System

2007: When the Whitney Museum decided that they needed to provide a more effective level of fire protection to the art stored in their Bulwark facility in Manhattan, they came to Advanced Electronic Solutions (AES) to help solve their problem. AES is one of the New York Metropolitan areas largest and most highly regarded privately held security, fire & life safety systems firms.

The Bulwark facility maintains over 30,000 square feet of storage space encompassing four floors. Management was not satisfied with the level of early warning the traditional fire detection systems offered to their high value warehousing facility. The artwork that the facility stores not only needed to be protected from fire but also from water that the sprinkler system dispenses in the event of a fire. Therefore, it was critical that the solution provide the earliest warning possible to allow personnel the opportunity to

investigate and possibly mitigate the fire issue prior to the sprinkler system engaging.

AES recommended and installed the VESDA system.

Whitney Museum

VESDA monitors the entire progression of a fire - easily detecting fire long before smoke is visible and long before any other forms of detection.

With the world's widest sensitivity range, VESDA produces multi-level warnings at the very early stage of an impending fire. This provides the valuable time necessary to initiate a flexible, appropriate response. Within the In-

cident Stage of the fire, VESDA easily detects minute levels of smoke present in the air and offers up to three levels of alarm, all with adjustable thresholds, before there is visible smoke, flaming fire, or intense heat, and often long before disruption, damage, or injury can take place.

To learn more about Advanced Electronic Solutions Inc. (AES) and what we can do for your company, please contact us at info@nyaes.com or by telephone in New York at (718) 461-2600 or New Jersey at (973) 887-3500.
